PROFILE

Cyber security researcher and Python developer with a strong interest in offensive and defensive security, vulnerability assessment, and AI-powered automation. Experienced in building security tooling, working with APIs and databases, and applying practical penetration testing techniques learned through academic coursework and certifications. Passionate about ethical hacking, secure software development, and emerging AI-driven security systems.

KEY PROJECTS

Network Vulnerability Scanner | *Python, Nmap, CVE Databases*

- Built an automated reconnaissance tool that scans hosts and open ports, fingerprints running services, and cross-references results against public CVE databases to flag known vulnerabilities.
- Generated structured risk-severity reports to help prioritize remediation, reducing manual scanning effort.

Web Application Penetration Testing Toolkit | *Python, OWASP Top 10, Requests/BeautifulSoup*

- Developed a modular toolkit to test web applications for common vulnerabilities including SQL injection, XSS, and CSRF, aligned with the OWASP Top 10 framework.
- Automated payload testing and response analysis, with exportable findings for use in security assessment reports.

Security Automation & Incident Alert Bot | *Python, Discord API, Log Monitoring*

- Extended prior Discord bot development experience into a security-focused automation bot that monitors logs and system events for suspicious activity.
- Implemented automated alerting and role-based access controls to streamline incident response and server security administration.

Secure Mobile Application (Firebase) | *Android, Kotlin, Firebase Auth*

- Rebuilt a real-time Firebase Android application with a security-first approach, implementing hardened authentication, encrypted data storage, and secure API communication.
- Applied secure coding practices to mitigate common mobile vulnerabilities such as insecure data storage and weak session handling.

SKILLS

Security:

Penetration Testing | Reverse Engineering | Vulnerability Assessment | OWASP | Network Security | OSINT | Ethical Hacking | Binary Exploitation

Development:

Python | C/C++ | SQL | OOP | Assembly 8086 | Kotlin | Android Studio | Visual Studio | HTML | CSS

Tools:

Git | Nmap | Wireshark | Cisco Packet Tracer | FuFF | Burp Suite | Ghirda | Netcat

EDUCATION

- **Bahauddin Zakariya University (BZU)** 10/2023 – Present
- **Govt. Graduate College of Science** 09/2021 – 09/2023
- **The Country School** 03/2011 – 08/2021

LANGUAGES

- English (Proficient)
- Urdu (Native)
